

My final project will be a guitar shopping site. The concept of this site is to be modern but minimal in design, with the idea of displaying guitars that users can add to cart like in some other examples shown in class. The website would be based off my midterm project in terms of the color scheme and even the logo I made. I will also call my new website the “World of Guitars”, but in this case it would be the shopping component of my midterm project. The site will have a home page with a header that browses through different images of guitars or “deals” that my site might have. The rest of the home page might just show some main guitars and designs that I like to be displayed. There will also be an about/contact page where users can know more about the shop owner (me), and then reach out for any issues, which I might do in the way of a form. The last part will be the browsing page, with a multitude of guitars displayed with the ability to add to a “cart”. I won’t actually have a cart, rather it would be a script where clicking on a plus would just increment the number on a cart symbol in the corner. The animations will be similar to my midterm at the basic level. There will be neon and rise animations when going to different pages, as well as hover effects on the items on the site. But on a larger scale, I might try to animate the logo of the site to spin periodically, or make the background animated. For jQuery, what I would like to implement is a dropdown interaction or a toggle that can reveal additional details about a guitar model. The typography of the project will continue to be Pirate one for titles, Goldman for headings, and Yrsa for the body text. The layout will be a mix of flexbox and grid in order to organize the nav and gallery like I did with my midterm website. The colors I’ll be using are the same as well, though maybe a little less of the more extreme colors to keep it minimal.

On the next page are image sketches I rendered using ChatGpt and Gemini after feeding it an image of my midterm website, one is very closely similar to my midterm project, while the other is way more intricate. I plan to code a mix of both. With my midterm, there might have been too many colors, so to keep the final minimal, I’ll simplify the color palette, make the sizing smaller, and make it more modern. I’ll continue to use inspiration from other guitar vendor sites like Guitar Center, Sweetwater, or even Reverb.
